your bus

PASSION, YEARS OF EXPERIENCE AND
FIRST-CLASS KNOW-HOW – THE KEY ADVANTAGES
FOR YOUR BUS.

WISEON, your bus – that's our pledge

WISEON Bus GmbH is a young company - but based on a long tradition. On the one hand we have the facility in Pilsting where, in April 2009, we took over the bus factory founded by NEOPLAN more than 30 years ago. On the other hand we have our committed team of more than 200 specialised and experienced bus builders who - like us - have a passion for buses. As an international small-series manufacturer, we develop and manufacture high-quality long-distance, city and special buses with „Made in Germany“ quality. In addition, we are a partner of MAN Nutzfahrzeuge AG and execute special conversions on buses to their commissions.

As a WISEON customer, you can rely on our high quality and the reliability and durability of our products. Our primary concern is your satisfaction. So we will be there for you and „your bus“, from the initial consultation, then production and delivery, through to customer-oriented service over a working life of many years - this you can depend on. We build your bus.

WISEON C-series

OUR GOAL: SATISFIED CUSTOMERS.
OUR SOLUTION: THE MOST ATTRACTIVE, ECONOMICAL
AND COMFORTABLE BUS IN ITS CLASS.

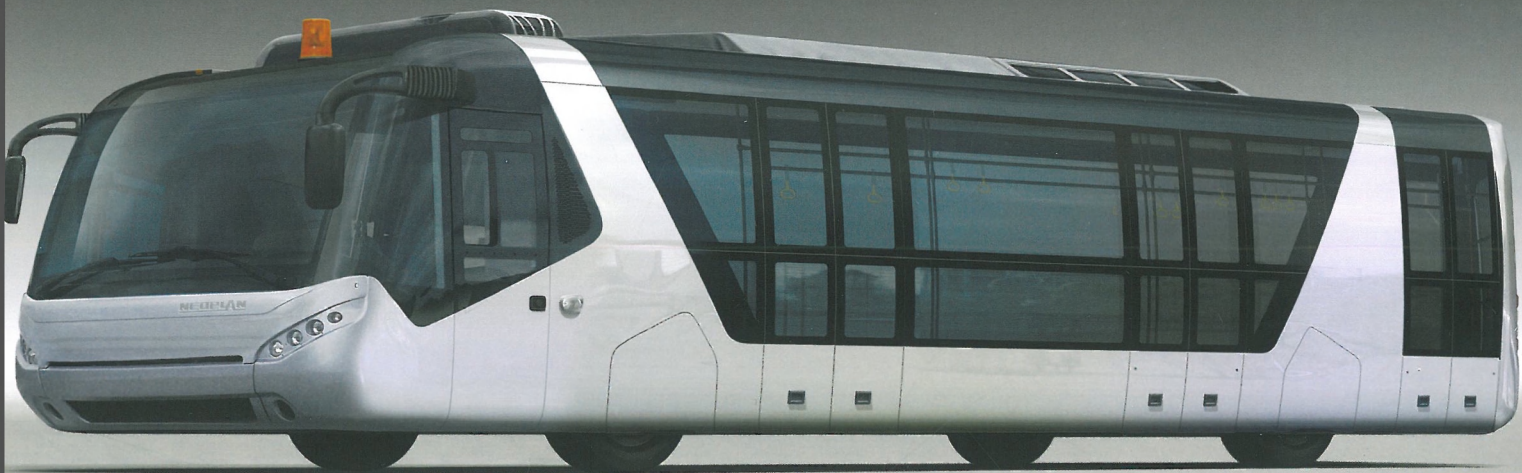

WISEON C-series – premium coaches for the future

Here's how a coach should be: attractive design, state-of-the-art technology and all the equipment for a comfortable journey. VISEON kicks off its first own range of coaches with the 10-metre VISEON C10 premium midibus. All C-series vehicles are developed entirely by VISEON and built in Pilsting in Lower Bavaria. Built with the skill of experienced bus mechanics and real „Made in Germany“ quality for Europe-wide travel: the VISEON C series.

Dynamic, safe, comfortable

All VISEON coaches share a common dynamic design with harmonised proportions, powerful lines and the characteristic VISEON „V“, reflected in the V-shaped B-pillar and the V-shaped lighting arrangement. Innovative space solutions make the most of a relatively low total height, an adequate standing height and a large luggage space. Inside, high-quality surfaces, roomy luggage racks and dynamic lines lend a touch of elegance and a generous sense of space.

That's not all VISEON coaches have to offer: The latest chassis technology from MAN ensures the safest and most comfortable ride possible. VISEON coaches also lead their class in consumption and environmental impact thanks to the latest MAN engine technology. The roll-over protection of the self-supporting frame structure is already designed to accommodate the requirements of the new European directive ECE R66. In addition, a KTL coating guarantees prolonged and reliable corrosion protection on susceptible components.

WISEON A-series

WISEON AIRPORT APRON BUSES OFFER MORE:
MORE RELIABLE, MORE ECONOMICAL,
MORE COMFORTABLE AND MORE STYLISH.

NEOPLAN Apron by WISEON – the airport apron bus for any application

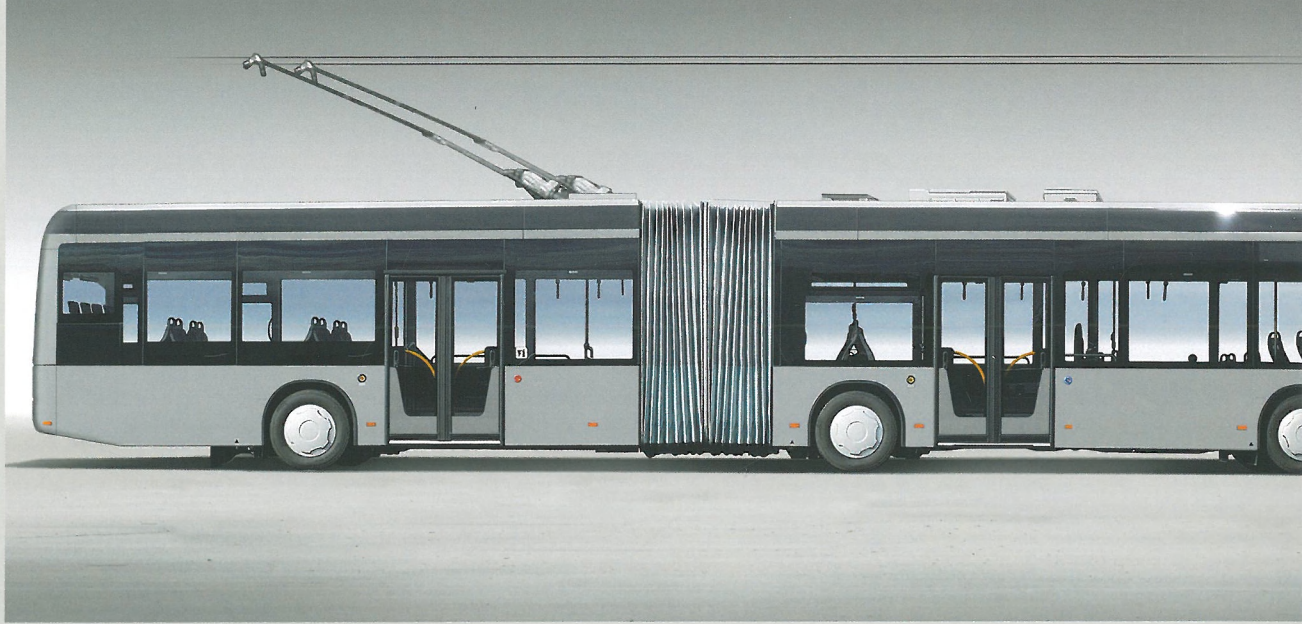

WISEON manufactures and markets NEOPLAN airport buses as the exclusive license partner of NEOPLAN Bus GmbH. Groundbreaking design, tried and tested technology and „Made in Germany“ quality are the hallmarks of the NEOPLAN Apron made by WISEON. Practical solutions, use of the best components and materials and the high quality of finishing by our experienced staff at Pilsiting ensure a long and reliable service life, even under the most testing conditions.

Satisfied air passengers thanks to the best equipment

NEOPLAN airport buses from WISEON are as modern as your airport. Not just in their design but in their technology too. Three wide double doors on each side make entry and exit quick and easy. Your passengers will feel right at home in the large passenger area with wide glass paneling, high-quality, easy-to-clean surfaces and convenient handles. A powerful air-conditioning system is available for all WISEON airport apron buses.

As the operator you will benefit from a reliable, economical and environmentally friendly drive with standard components from MAN, ZF and Kessler.

NEOPLAN Apron made by WISEON can carry from 66 to 137 passengers, depending on the model. They are available in widths of 2.75 or 3.17 metres and in lengths of 12, 13.30 and 14.70 metres.

WISEON L-series

WE DON'T JUST BUILD BUSES WITH
ELECTRIC DRIVES, WE OFFER SOLUTIONS
FOR ELECTRIC VEHICLE SYSTEMS.

NEOPLAN Trolley by VISEON – electrified from the word go

VISEON develops, manufactures and markets NEOPLAN trolleybuses as the exclusive license partner of NEOPLAN Bus GmbH. An in-house team of skilled professionals is responsible for this development and construction. VISEON trolleybuses are not diesel buses converted to run on electricity but have been developed specifically to run on electricity. The chassis has been designed specifically to house electric drive components. The brake system, steering hydraulics, heating and air conditioning have also been designed for electrical power. Even the bodywork with the unique raised roof edges has been specially designed for the NEOPLAN Trolley. As an operator you will also benefit from standard components used wherever wear and damage is likely to occur routinely in the vehicle: this means windows, interior fittings, lighting and chassis parts that come under stress. VISEON works together with all the large European manufacturers of electric drives.

Electric buses – the future of urban transport

Choosing trolleybuses means choosing progress. We are no longer limited to our trusted city buses, which we now offer in versions from 12 to 18.75 metres in length. Rather we work with our internationally-experienced partners to develop the right vehicle for each situation. In doing this we set new trends with our customers: electronic lane guidance, new current carrying technology or vehicle lengths over 20 metres – our experienced trolleybus specialists will be happy to advise you.

WISEON S-series

SPECIAL GUESTS REQUIRE SPECIAL TREATMENT:
WE WILL FIT OUT YOUR COACH
TO MEET YOUR INDIVIDUAL NEEDS.

WISEON customizing – bespoke is our spe- ciality

Whether you need a galley kitchen in the rear or circular seating, mahogany cabinets or a multimedia system, leather loungers or practical conference seating - whatever you want, we can do it. Our bodywork professionals, with many years of experience, will help you plan your design and help you find suitable materials and components. Committed and highly-trained staff will transform your wishes into a reality, naturally with the highest level of craftsmanship.

Interior customization or a complete refit

And this goes beyond interior design. Our team of engineers and experienced production team will also be pleased to make changes to the design of the body for you. Whether widened entries, larger toilets, library buses or prison buses, there is no limit to how far we will go to meet your requirements. Thanks to our expertise in constructing complete vehicles, we can provide highly customized vehicles with the quality of the original. This is why we are one of the qualified partners of MAN Nutzfahrzeuge AG for individual customizations of NEOPLAN and MAN high-end coaches. One-off projects are a matter of trust. Trust VISEON to make the best job of your coach conversion.
